

The **Winchester Digital Boost for Business Programme** is offering **10 free places** for micro and small businesses across the Winchester district to improve their digital capability and make better use of technology.

Each participating business will receive:

- A comprehensive digital assessment
- A personalised Digital Action Plan
- Four hours of one-to-one mentoring and implementation support

The programme is designed to help businesses improve areas such as their website, online presence, digital systems, cyber security, data, and explore how AI and automation could save time and increase productivity.

As places are limited, we'd be very grateful if you could share this opportunity through your parish newsletter, website, social media channels, or with any local businesses that you think may benefit.

More information and the registration form can be found here:
